

## Seatrans Chemical Tankers welcomes two new builds

**It is with great pleasure we announce that Seatrans has entered into a long-term time charter agreement with purchase options for two newbuildings from Kitanihon Shipbuilding Co Ltd.**

The new vessels are expected to be delivered in first and second half of 2023. The project is the result of almost one year of close cooperation between Japanese investors and Seatrans.

The chemical tankers will be built to the highest environmental, fuel-efficiency, and safety standards in line with the company's commitment to operating responsibly. The vessels will be in compliance with IMO NOx Tier 3 and Sox emission requirements and follow the upcoming Energy Efficiency Design Index (EEDI) Phase 3 compliance level.

The vessels are 12,500 deadweight advanced stainless steel chemical carriers with 18 segregations, have thermal oil heating system installed and are fitted to carry propylene oxide. With a flexible cargo tank figuration, these vessels will be perfect for our parcel trade between Northern Europe and the Mediterranean.

With these additions, Seatrans Chemical Tankers are taking important steps to renew our fleet and remain long-term committed to our existing and new customers.
